1 [A resolution strategy for verifying cryptographic protocols with CBC encryption and blind signatures](#)

Véronique Cortier, Michael Rusinowitch, Eugen Zălinescu

 July 2005 **Proceedings of the 7th ACM SIGPLAN international conference on Principles and practice of declarative programming PPDP '05**

Publisher: ACM Press

Full text available: pdf(214.71 KB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#), [review](#)

Formal methods have proved to be very useful for analyzing cryptographic protocols. However, most existing techniques apply to the case of abstract encryption schemes and pairing. In this paper, we consider more complex, less studied cryptographic primitives like CBC encryption and blind signatures. This leads us to introduce a new fragment of Horn clauses. We show decidability of this fragment using a combination of several resolution strategies. As a consequence, we obtain a new decidability re ...

2 [Strength of two data encryption standard implementations under timing attacks](#)

Alejandro Hevia, Marcos Kiwi

 November 1999 **ACM Transactions on Information and System Security (TISSEC)**, Volume 2 Issue 4

Publisher: ACM Press

Full text available: pdf(183.73 KB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

We study the vulnerability of two implementations of the Data Encryption Standard (DES) cryptosystem under a timing attack. A timing attack is a method, recently proposed by Paul Kocher, that is designed to break cryptographic systems. It exploits the engineering aspects involved in the implementation of cryptosystems and might succeed even against cryptosystems that remain impervious to sophisticated cryptanalytic techniques. A timing attack is, essentially, a way of obtaining some users ...

3 [Multi-agent systems and social behavior: Blind sales in electronic commerce](#)

E. Aïmeur, G. Brassard, F. S. Mani Onana

March 2004 **Proceedings of the 6th international conference on Electronic commerce ICEC '04**

Publisher: ACM Press

Full text available: [pdf\(330.05 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

We start with the usual paradigm in electronic commerce: a consumer who wants to buy from a merchant. However, both parties wish to enjoy maximal privacy. In addition to remaining anonymous, the consumer wants to hide her browsing pattern and even the identification of the product she may decide to buy. Nevertheless, she wants to be able to negotiate the price, pay, receive the product and even enjoy maintenance on it. On the other hand, the merchant wants to leak as little information as possib ...

4 Data privacy and security: Simultaneous scalability and security for data-intensive web applications

Amit Manjhi, Anastassia Ailamaki, Bruce M. Maggs, Todd C. Mowry, Christopher Olston, Anthony Tamasic

June 2006 **Proceedings of the 2006 ACM SIGMOD international conference on Management of data SIGMOD '06**

Publisher: ACM Press

Full text available: [pdf\(275.45 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

For Web applications in which the database component is the bottleneck, scalability can be provided by a third-party Database Scalability Service Provider (DSSP) that caches application data and supplies query answers on behalf of the application. Cost-effective DSSPs will need to cache data from many applications, inevitably raising concerns about security. However, if all data passing through a DSSP is encrypted to enhance security, then data updates trigger invalidation of large regions of ca ...

5 Distributed collaborative key agreement and authentication protocols for dynamic peer groups

Patrick P. C. Lee, John C. S. Lui, David K. Y. Yau

April 2006 **IEEE/ACM Transactions on Networking (TON)**, Volume 14 Issue 2

Publisher: IEEE Press

Full text available: [pdf\(837.49 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We consider several distributed collaborative key agreement and authentication protocols for dynamic peer groups. There are several important characteristics which make this problem different from traditional secure group communication. They are: 1) distributed nature in which there is no centralized key server; 2) collaborative nature in which the group key is contributory (i.e., each group member will collaboratively contribute its part to the global group key); and 3) dynamic nature in which ...

Keywords: authentication, dynamic peer groups, group key agreement, rekeying, secure group communication, security

6 Short papers: Specifying electronic voting protocols in typed MSR

Theodoros Balopoulos, Stefanos Gritzalis, Sokratis K. Katsikas

November 2005 **Proceedings of the 2005 ACM workshop on Privacy in the electronic society WPES '05**

Publisher: ACM Press

Full text available: [pdf\(141.00 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Electronic voting, as well as other privacy-preserving protocols, use special cryptographic primitives and techniques that are not widely used in other types of protocols, e.g. in authentication protocols. These include blind signatures, commitments, zero-knowledge proofs, mixes and homomorphic encryption. Furthermore, typical formalizations of the Dolev-Yao intruder's capabilities do not take into account these primitives and techniques, nor do they consider some types of attacks that e-voting ...

Keywords: Dolev-Yao intruder, electronic voting, privacy, security protocols, specification, typed MSR

7 Physical privacy: Privacy management for portable recording devices

J. Alex Halderman, Brent Waters, Edward W. Felten

October 2004 **Proceedings of the 2004 ACM workshop on Privacy in the electronic society WPES '04**

Publisher: ACM Press

Full text available: pdf(321.69 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The growing popularity of inexpensive, portable recording devices, such as cellular phone cameras and compact digital audio recorders, presents a significant new threat to privacy. We propose a set of technologies that can be integrated into recording devices to provide stronger, more accurately targeted privacy protections than other legal and technical measures now under consideration. Our design is based on an informed consent principle, which it supports by the use of novel devices and pr ...

8 Unlinkable serial transactions: protocols and applications

Stuart G. Stubblebine, Paul F. Syverson, David M. Goldschlag

November 1999 **ACM Transactions on Information and System Security (TISSEC)**, Volume 2 Issue 4

Publisher: ACM Press

Full text available: pdf(184.87 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

We present a protocol for unlinkable serial transactions suitable for a variety of network-based subscription services. It is the first protocol to use cryptographic blinding to enable subscription services. The protocol prevents the service from tracking the behavior of its customers, while protecting the service vendor from abuse due to simultaneous or cloned use by a single subscriber. Our basic protocol structure and recovery protocol are robust against failure in protocol termination. ...

9 Improved proxy re-encryption schemes with applications to secure distributed storage

Giuseppe Ateniese, Kevin Fu, Matthew Green, Susan Hohenberger

February 2006 **ACM Transactions on Information and System Security (TISSEC)**, Volume 9 Issue 1

Publisher: ACM Press

Full text available: pdf(331.59 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In 1998, Blaze, Bleumer, and Strauss (BBS) proposed an application called *atomic proxy re-encryption*, in which a semitrusted proxy converts a ciphertext for Alice into a ciphertext for Bob *without* seeing the underlying plaintext. We predict that fast and secure re-encryption will become increasingly popular as a method for managing encrypted file systems. Although efficiently computable, the wide-spread adoption of BBS re-encryption

has been hindered by considerable security risks. ...

10 Teaching secure communication protocols using a game representation

Leonard G. C. Hamey

January 2003 **Proceedings of the fifth Australasian conference on Computing education - Volume 20 ACE '03**

Publisher: Australian Computer Society, Inc.

Full text available:  [pdf\(252.19 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The Security Protocol Game is a highly visual and interactive game for teaching secure data communication protocols. Students use the game to simulate protocols and explore possible attacks against them. The power of the game lies in the representation of secret and public key cryptography. Specifically, the game provides representations for plain text and encrypted messages, message digests, digital signatures and cryptographic keys. Using these representations, students can construct public ke ...

11 A survey of key management for secure group communication

Sandro Rafaeli, David Hutchison

September 2003 **ACM Computing Surveys (CSUR)**, Volume 35 Issue 3

Publisher: ACM Press

Full text available:  [pdf\(346.27 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citings](#), [index terms](#)

Group communication can benefit from IP multicast to achieve scalable exchange of messages. However, there is a challenge of effectively controlling access to the transmitted data. IP multicast by itself does not provide any mechanisms for preventing nongroup members to have access to the group communication. Although encryption can be used to protect messages exchanged among group members, distributing the cryptographic keys becomes an issue. Researchers have proposed several different approach ...

15 Verifiable encryption of digital signatures and applications

Giuseppe Ateniese

February 2004 **ACM Transactions on Information and System Security (TISSEC)**, Volume 7 Issue 1

Publisher: ACM Press

Full text available: pdf(258.12 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper presents a new simple schemes for verifiable encryption of digital signatures. We make use of a trusted third party (TTP) but in an *optimistic* sense, that is, the TTP takes part in the protocol only if one user cheats or simply crashes. Our schemes can be used as primitives to build efficient fair exchange and certified e-mail protocols.

17 Applied cryptography II: Stateful public-key cryptosystems: how to encrypt with one 160-bit exponentiation

Mihir Bellare, Tadayoshi Kohno, Victor Shoup

October 2006 **Proceedings of the 13th ACM conference on Computer and communications security CCS '06**

Publisher: ACM Press

Full text available: pdf(235.26 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We show how to significantly speed-up the encryption portion of some public-key cryptosystems by the simple expedient of allowing a sender to maintain state that is re-used across different encryptions. In particular we present stateful versions of the DHIES and Kurosawa-Desmedt schemes that each use only 1 exponentiation to encrypt, as opposed to 2 and 3 respectively in the original schemes, yielding the fastest discrete-log based public-key encryption schemes known in the random-oracle and stan ...

October 2002 **Proceedings of the second ACM international workshop on Principles of mobile computing POMC '02**

Publisher: ACM Press

Full text available: [pdf\(190.14 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper presents an efficient algorithm for the secure group key management of mobile users. The most promising protocols to deal with group key management are those based on logical key hierarchy (LKH). The LKH model reduces to logarithmic size the resources needed: computation time, message exchanged, and memory space. In the framework of the LKH model, we present a new protocol LKH++ that outperforms the other proposed solutions in the literature. Such performance improvements are obtained ...

20 A key-chain-based keying scheme for many-to-many secure group communication

Dijiang Huang, Deep Medhi

November 2004 **ACM Transactions on Information and System Security (TISSEC)**, Volume 7 Issue 4

Publisher: ACM Press

Full text available: [pdf\(311.81 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We propose a novel secure group keying scheme using *hash chain* for *many-to-many* secure group communication. This scheme requires a *key predistribution center* to generate multiple hash chains and allocates exactly one hash value from each chain to a group member. A group member can use its allocated hash values (secrets) to generate group and subgroup keys. Key distribution can be offline or online via the key distribution protocol. Once keys are distributed, this scheme enab ...

Keywords: Hash chain, key chain, many-to-many secure group communication, secure group communication
